

Internal Medicine Sub-Specialties that Diagnose and Treat Osteoporosis and Other Forms of Bone Loss
at Westroads Medical Group

- **Rheumatology:** is a field of Internal medicine that specializes in diseases that affect the body's muscles, bones and joints. Common problems treated by Rheumatologists include arthritis, auto-immune diseases and Osteoporosis.
- **General Internal Medicine:** is a primary source of medical care for adults. The General Internist counsels patients, performs screening evaluations and coordinates that evaluation and treatment of conditions affecting many body systems. This includes the diagnosis and treatment of Osteoporosis.
